

- Check and clean dryer vents and the vent duct to remove any lint or obstructions, which could spark a fire or trap moisture that could promote mold growth.
- When using a humidifier, follow the recommendations as set by the manufacturer. Settings will change as the weather fluctuates.
- Adjust the registers for cooling on two story homes. Because warm air rises, close registers on the 1st floor and open registers on the 2nd floor. This will allow the cold air coming out on the 2nd floor to sink to the 1st floor.
- Check alignment of gutters and downspouts to ensure water is properly diverted away from the home.

Monthly

- Check the garage door safety mechanism.
- Clean/replace furnace filters. It is important this be done monthly.
- A dirty furnace filter can cause damage to your furnace/HVAC unit and any damages incurred are not covered under warranty.

Fall/Winter

- Remove hoses from all outdoor spigots and shut off supply to and drain spigot. Clean gutters.
- Adjust and clean door thresholds.
- Check weather-stripping and sweeps on doors and replace as needed. Caulk/paint exterior trim as needed.
- Caulk tubs, showers and sinks.
- Check ceramic tile- seal/re-grout as needed. Test the furnace- have a trial run early in the Fall.
- Caulk around all windows, doors, countertops, sinks as needed. Inspect fireplace.
- Clean and wax cabinets. This will prevent warping, cracking and drying out of the wood.
- When using a humidifier, follow the recommendations as set by the manufacturer. Settings will change as the weather fluctuates.
- Adjust the registers for heating on two story homes. Because warm air rises, open registers on the 1st floor and close or partially close registers on the 2nd floor. This will allow the warm air coming out on the 1st floor to rise to the 2nd floor and distribute the heat evenly throughout your home.
- Check alignment of gutters, downspouts and splash blocks to ensure water is properly diverted away from the home.

Monthly

- Check the garage door safety mechanism.
- Clean/replace furnace filters. It is important this be done monthly.
- A dirty furnace filter can cause damage to your furnace/HVAC unit and any damages incurred are not covered under warranty.
- GFCI electrical outlets should be tested.
